

[For Students]

YOKOHAMA National University
Infection Prevention Guidelines for In-person
Classes

(For Students)

Ver.2
November 1, 2021 Edition

Introduction

Even after two years since the country's first case of COVID-19 was confirmed, the number of COVID-19 cases currently continue to remain high in the Tokyo metropolitan area.

Yokohama National University has established the HQ for Crisis Management and Alerting to collect information on the novel coronavirus in an integrated manner and has promoted infection prevention measures throughout the university. We also established the YNU Action Plans to Prevent the Spread of the Novel Coronavirus, and have asked students, teachers, and faculty members to act in accordance with these action plans.

In December 2020, we decided on a course implementation policy (conducting in-person classes whenever possible) for FY 2021. However, as was the case in the FY2021 spring semester, for the fall semester also, it is still uncertain whether the spread of infection can be controlled despite the many efforts made, such as thorough implementation of basic infection prevention measures and reduced outings. Under these circumstances, in order to resume university life centered on in-person classes in November 2021 in a safe and secure manner, we have partially modified the Infection Prevention Guidelines for In-Person Classes, and will conduct in-person classes on the premise that we will be able to obtain the full understanding and cooperation of students. Students should pay close attention to preventing the spread of the novel coronavirus in accordance with these guidelines. In addition to these guidelines, if there are other guidelines that respective departments, graduate schools, or institutions have put into place, check them thoroughly.

About the novel coronavirus disease (COVID-19)

1. What is COVID-19?

COVID-19 (SARS-CoV2) is one of the coronaviruses. In many cases, the infection causes fever, respiratory symptoms (cough, sore throat, nasal discharge, and nasal congestion), headache, fatigue, and initial symptoms that resemble those of flu or a common cold. Meanwhile, some people show no symptoms.

It is said that the virus can enter the mucous membrane, but it cannot enter healthy skin, and only attaches to its surface. The virus on surfaces will break over time. However, depending on the type of surface, it is said to remain infectious for about 24 to 72 hours.

Washing hands with running water alone is effective because it can wash away the virus.

Handwashing with soap is more effective because it can break down the viral membrane. When washing hands, it is said that dirt tends to remain on the fingertips, between the fingers, wrists, and wrinkles in the hands. It is important to wash these areas carefully. When washing hands with water and soap is not possible, alcohol-based antiseptic can also make them non-infectious by breaking down the lipid membranes.

2. How does COVID-19 spread?

It is commonly caused by droplet infection or contact infection. However, as explained before, it is said that you will not get infected simply by contact with your hands and fingers.

Droplet infection refers to infection in which the virus is released in droplets (sneezing, coughing, or spitting) of an infected person and is inhaled by another person through the mouth or nose.

Contact infection is caused by the attachment of the virus when an infected person touches objects

[For Students]

around them after suppressing sneezing or coughing with their hands. When other people touch such objects, the virus attaches to the hand, and by touching the mouth and nose with the hand, they get infected through the mucous membrane.

In other words, keeping the virus out of your mouth, nose, and eyes is important to prevent infection.

Therefore, basic infection prevention measures have the following objectives:

- Wear a mask => Do not spread droplets. Do not allow the virus to enter your mouth or nose.
- Social distancing => Prevent droplets of infected persons from reaching your face.
- Wash your hands thoroughly => Wash away any virus on your hands before touching your face.

3. Can you get infected from infected people without symptoms?

It has been reported that one of the characteristics of COVID-19 is that it is highly infectious both before and after the onset of symptoms. That is, there is a risk that the infection will spread even though infected people have no symptoms.

Keep your distance from people on the assumption that people around you might be infected, wear a mask when you go out, exercise coughing etiquette, wash your hands with soap, disinfect your hands with alcohol, and provide ventilation. In addition to these general prevention measures, take care of your health by getting sufficient sleep, and protect yourself by taking into account the situation in your community.

(Source: Q&A on Coronavirus Disease 2019 (COVID-19) for the Public by the Ministry of Health, Labour and Welfare)

https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/kenkou_iryuu/dengue_fever_qa_00001.html

People with underlying conditions, elderly, and pregnant women in these guidelines

Underlying conditions in these guidelines are (i) to (vii) below:

- (i) Respiratory disease (chronic obstructive pulmonary disease [COPD], etc.)
- (ii) Chronic kidney disease
- (iii) Diabetes
- (iv) Cardiovascular disease, heart failure
- (v) High blood pressure
- (vi) Diminished immune function (persons who are using immunosuppressants or anticancer drugs)
- (vii) Obesity (BMI 30 or more)
 - Elderly persons
 - Pregnant women

Increased risk of infection: **Five** Scenes

Scene 1 Social gatherings

- Attention lowers as the mood rises through the effects of drinking. In addition, hearing is dulled and people tend to speak louder.
- The risk of infection increases when a large number of people stay for a long time in a small space separated by a partition.
- The risk of infection is also increased by sharing chopsticks or glasses with others.

Scene 2 Long feasts in large groups

- Eating and drinking for long periods of time, eating and drinking at nightclubs and similar establishments, and late-night bar hopping increase the risk of infection compared with eating for short periods of time.
- Eating and drinking with large numbers of people, for example, five or more, increases the risk of infection because loud voices and droplets are more likely to spread.

Scene 3 Conversation without

- Close communication without a mask increases the risk of infection through droplets and microdroplets.
- Cases of infection without a mask have been confirmed at daytime karaoke and other places.
- You also need to be careful when you are in a car, or on a train or a bus.

Scene 4 Communal living in a

- Communal living in small spaces increases the risk of infection by sharing closed spaces for extended periods of time.
- Cases of suspected infection in common areas such as rooms and toilets in dormitories have been reported.

Scene 5 Switching locations

- Changing locations, such as during breaks at work, can increase the risk of infection due to carelessness and environmental changes.
- Cases of suspected infection in resting rooms, smoking areas, and dressing rooms have been confirmed.

1 Basic points

(I) Mask, hand-wash, disinfection

- Masks (non-woven mask) must be worn. Prepare your own mask and bring extras, and wear it properly so that it covers from your nose to chin.
- When wearing a mask in summer when the temperature and humidity are high, make sure to drink water frequently to prevent heatstroke.
- Do not talk without a mask.
- Wash your hands frequently.
- There is a disinfectant at the entrance of each classroom. Disinfect your hands and fingers every time you enter or leave the room.
- When you cough or sneeze, use a mask, handkerchief, sleeves, or the inside of your elbow, and hold your mouth and nose firmly.

(II) Temperature measurement and health management

- Take your temperature at home every day before coming to school.
- Check your health condition, and record your temperature and actions for the day.
- Keep the record by yourself for one month.
- If you are not feeling well, you are not allowed to enter the campus. See 7. Measures to be taken in the event of infection (including a suspicion of infection) for more information.

(III) Social distancing

- Maintain a distance of approximately two meters (at least one meter) from others.
- When conversing, always wear a mask (non-woven mask), avoid conversing directly across from the other person, and take necessary precautions to prevent droplets.
- To avoid close contact in the classroom, seats with the required capacity (approximately 2/3 or less of the maximum capacity) and space are secured. Take a seat and be sure to keep the left and right seats vacant.
- Even during breaks, take care to avoid a large number of people gathering, and do not speak loudly or talk at close distances.
- Do not talk in a small space such as an elevator or a toilet where you cannot keep enough distance from people.

(IV) Our policy for investigating the behavior of infected students while they are on campus

- On January 8, 2021, Kanagawa prefecture announced its administrative policy that, in principle, it would not conduct a contact investigation of infected persons at universities, but would instead conduct a self-health observation (local government call center consultation as appropriate) of those who had contact with infected persons. In response to this announcement, the university will conduct a 'behavioral survey' to determine how

the infected person has been doing, and take measures classified into the following three categories:

- (i) Persons who are requested to stay at home: Persons who had a meal while talking with an infected person or who had contact (within one meter) without a mask are treated as persons at high risk. They will be requested to stay at home for ~~two weeks~~ 7 days and to consult with a local government call center as soon as they become unwell.
- (ii) Persons who are requested to observe their health condition: Persons who are in proximity of an infected person on campus and eat together, but do not have a conversation with the infected person, or who are present with the infected person while wearing a mask, are not requested to stay at home, but are requested to observe their health condition for ~~two weeks~~ 7 days and to wear a mask unless they are alone.
- (iii) Persons who were proximity of an infected person on campus, but wore masks and did not have contact within one meter of the infected person, are not subject to any special requests.

(V) Daily health management and basic infection prevention measures

- Make sure your actions minimize your risk of infection. More importantly, be fully aware that you could infect others as a spreader (source of infection) yourself because young people in particular, could be asymptomatic (infected but not showing symptoms).
- Traveling beyond your area of residence may not only increase your risk of infection but could also spread infection. Furthermore, getting infected outside your area of residence would make it difficult to determine the source of infection. Therefore, exercise extreme caution when traveling beyond your area of residence for reasons other than traveling to school.
- As much as possible, avoid going to events or venues where people are talking to each other closely in a closed space with poor ventilation, regardless of the size of the events.
- To prevent infection, as with prevention measures against influenza, stay in good health by getting adequate sleep and nutrition, wear masks properly, wash your hands frequently with a soap, and disinfect your hands and fingers, as well as getting adequate sleep and nutrition to keep you in good health. If you are worried about your physical condition, call the YNU Health Service Center for consultation.
- The risk of infection from droplets has been identified outdoors as well. Wear masks even while outdoors if you are in close contact with other people. However, under conditions such as high heat and high humidity, the risk of heatstroke could become high, in which case, you may remove your mask outdoors as long as you are able to sufficiently distance yourself from others.
- When eating lunch or other meals, silent eating or “mokushoku” is the general rule, regardless of whether it is indoors or outdoors. When waiting in line at the cafeteria, maintain an appropriate distance and avoid conversation.
- Some people assume that eating and drinking outdoors has a lower risk of infection as it is not an enclosed space. However, it is said that the risk of infection when dining without masks is high even if it takes place outdoors. Even when eating outdoors, take the same infection prevention measures as when eating indoors. Also, do not drink in the streets (drinking alcohol in streets or other public spaces). Talking loudly causes

droplets to spread more easily, thereby further increasing the risk of infection.

- ☑ Those who are vaccinated can expect prevention from developing the illness but it is still unclear the extent to which those vaccinated can prevent transmission to others. Hence, even those who have been vaccinated should continue to implement infection prevention measures.
- ☑ The Delta variant has been reported to be about twice as contagious as previous variants. Do not to talk without a mask even outdoors, keeping in mind that talking even for a short amount of time unmasked can still lead to infection.

2 Classes

(I) Points to consider when conducting in-person classes

- ☑ When you go to school, wear a mask, refrain from talking when you cannot maintain social distancing, and try to avoid busy hours as much as possible.
- ☑ Create your time schedule so that you do not have too much free time between classes.
- ☑ For the fall semester of FY2021, as was the case in the spring semester, we will consider individual circumstances as much as possible for foreign students who are unable to enter Japan, students with underlying conditions (including family members living together), the elderly, pregnant women, and students with strong psychological anxiety towards in-person classes (including family members living together). Check the notifications from your department or graduate school for details.
- ☑ In principle, experiments, practical exercises, field studies, practicums, etc. will be conducted as in-person classes.
- ☑ All courses at the university (excluding health and sports classes) are in principle taught remotely, but there are some that taught are taught in-person.
- ☑ For experiments, practical training, practical skills, and exercises, follow the instructions of the teachers and faculty members, such as wiping and disinfecting items shared by multiple persons (tools and equipment).
- ☑ When participating in off-campus practical training, fieldwork, or internships, follow infection prevention measures stipulated by the facility.
- ☑ For the graduate schools, each department and faculty determines the teaching method based on the educational effects.
- ☑ With regards to absences from classes for those infected with COVID-19, for the fall semester of FY2021, as was the case in the spring semester, students will be considered not absent from classes if they fall under any of the following:
 - (i) If the student is infected with COVID-19
 - (ii) If the student is identified as having close contact with an infected person
 - (iii) If the student is not feeling well (7 III, 7 IV)
 - (iv) If the student is asked to stay at home by the university to prevent infection from spreading
- ☑ With regards to absences from classes for the purpose of obtaining the coronavirus vaccine, if students need to be absent on the day of the vaccination and the following day, these students will be considered not absent from classes as long as they take the necessary procedures. Furthermore, if students need to be absent two or more days after the vaccine, they should consult the person in charge of school affairs for their

affiliated department.

(II) Use of the classroom

- There is a disinfectant at the entrance of each classroom. Disinfect your hands and fingers every time you enter or leave the room. (ICYMI)
- To avoid close contact in the classroom, seats with the required capacity (approximately 2/3 or less of the maximum capacity) and space are secured. Be sure to keep the left and right seats vacant. (ICYMI)
- In order to ensure a smooth seating in the classroom, a red sticker on the desk may be used in one-way classes, and a green sticker on the desk may be used in interactive classes to indicate available seats. In addition to the colored stickers, there are cases where the class format is fixed and seating is designated in the classroom, or where seating is designated by attaching an enlarged seating chart in the classroom.
- The number of students is determined from the viewpoint of ensuring ventilation capacity and one-meter distance in rooms that do not have a fixed capacity, such as laboratories. If it is unavoidable to approach within one meter during class, we will implement thorough infection prevention measures such as wearing masks properly and not speaking loudly.
- There is a disinfectant at the entrance so that you can use to disinfect the desk. If you are concerned, disinfect your desk as needed. We clean door knobs, light switches, handrails, desks, and other areas that can be touched by multiple people at least once a day, but we cannot completely disinfect them. Please wash and disinfect your hands and fingers thoroughly.
- It is strictly prohibited to have a private talk in the classroom not pertinent to a class.
- It is also strictly prohibited to have a private talk in the hallways or the toilet of the classroom buildings.
- A transparent shielding board will be set on the teacher's desk in the classroom.
- We open classroom doors and windows as appropriate for constant ventilation. The air conditioner is working as needed, but handle the heat or cold with your clothes. Also, please note that we may open and close the windows during class.
- In classrooms in the classroom buildings, measures are implemented so that one person can ventilate 30 cubic meters per hour, as determined by the Ministry of Health, Labour and Welfare, in order to ensure sufficient ventilation capacity.
- If you are dining in a classroom or taking a seat in an open classroom using Wi-Fi, enter the information such as the location of your seat, student ID number, and hours of stay using the QR code on the desk. You do not need to scan the QR code in regular classes.
- In the PC classroom, a disinfectant is installed near the entrance. Users should thoroughly disinfect their hands and fingers by themselves.

(III) Use of gymnasium, field, and ground

- Persons who have a fever or are in poor physical condition cannot participate.
- Wash your hands and disinfect your fingers thoroughly before, during, and after activities.

[For Students]

- Wear a mask when you are not exercising.
- When performing physical education in the gymnasium or ground, classes will be conducted with as few students as possible and with sufficient distance, while reducing the risk of infection as much as possible.
- When performing physical education indoors such as in the gymnasium, we keep doors and windows open to ventilate.
- Do not share gear to use unnecessarily between students.
- During class, you should avoid unnecessary conversation, speaking in a loud voice, touching bodies of others, sharing drinks or towels, spitting, or touching your face with hands that also touch shared equipment.
- When changing clothes, avoid Three Cs (closed spaces, crowded spaces, close-contact settings) and keep conversations to a minimum.
- Change your clothes quickly in the changing room and keep your time in the room to a minimum.
- Enter the information such as student ID number and hours of stay using the QR code posted at the entrance. In order to prevent the spread of infection in the university, enter such information every time you enter the room.

3 Cafeterias, lunch

- Wash your hands and disinfect your fingers thoroughly before and after meals.
- Refrain from talking during meals and wear a mask except while eating.
- Leave the cafeteria as soon as you finish eating.
- Leave a space when you line up. Entrance to the cafeterias may be restricted if it is crowded.
- There is not enough space in the cafeterias. If you are going to take a class in the afternoon, come after having lunch outside the university whenever possible.
- If you do not have classes in the second or third period, take lunch during the second or third period to avoid congestion.
- Use cashless payment instead of cash as much as possible.
- You cannot use the cafeterias if you have a fever or feel sick.
- The cafeterias are very crowded at peak congestion times (around 12:00–13:00). If you bring a lunch box, use a kitchen car, or buy lunch at a convenience store, use an empty space such as the classroom buildings. When you eat in the classroom buildings, keep a distance of two meters or more from others and refrain from talking while not wearing a mask. Also, there is a disinfectant at the entrance so that you can use to disinfect the desk. If you are concerned, disinfect your desk as needed.
- Enter the information such as student ID number and hours of stay using the QR code posted at the entrance. In order to prevent the spread of infection in the university, enter such information every time you enter the room.

4 Libraries

- Wear a mask properly in the libraries even if there is no one around.

[For Students]

- Disinfect your hands and fingers when you enter or use the automatic lending machine.
- Seats for reading and online classes are kept at least one meter away from the seats next to each other to avoid close contact.
- We regularly disinfect the reading seats, OPAC, and copy machines, but some equipment cannot be disinfected because it may cause malfunction. Disinfect or wash your hands before and after use.
- You can extend the rental period without visiting the library through the library portal service My Library. Please make use of it.
<https://opac.lib.ynu.ac.jp/portal/>
- Refrain from touching any books that you do not plan to borrow.
- We will prepare a book sterilizer that users can use freely.
- To secure a place to eat, you are allowed to bring food and drink in the information lounge on the first floor of the library. Make use of the place keeping hand-washing, disinfection, and avoiding three Cs in mind.
- In order to prevent heat stroke and dry throat, we allow you to drink water in the buildings. When you bring it in, make sure to put it in an airtight container. After touching the bookshelves and footstool, wash hands and disinfect before drinking.
- Check the library website for the latest information.
<https://www.lib.ynu.ac.jp/>
- Enter the information such as the location of your seat, student ID number, and hours of stay using the QR code posted on the desk. In order to prevent the spread of infection in the university, enter such information every time you take a seat.

5 Extracurricular activity

- Activities should be conducted in accordance with the university's Guidelines on the Resumption of Extracurricular Activities.
- The same shall apply to personal activities and organizations that have not been reported.

6 Other

- (I) Eating
 - Until the COVID-19 pandemic is over, refrain from having drinking parties and dining events that involve talking.

7 Measures to be taken in the event of infection (including a suspicion of infection)

(I) Infection

- Students who are diagnosed with COVID-19 should call the Health Service Center (045-335-1518, weekdays 9:00–17:00) to report their diagnosis. In this case, attendance will be suspended according to the School Health and Safety Act, and the suspension period will be until the student is cured. Before returning to school, inform the YNU

[For Students]

Health Service Center of your completion of treatment or recovery.

(II) Close contact

- Students who are identified as having close contact with an infected person should call the Health Service Center (045-335-1518, weekdays 9:00–17:00) to report as such. In this case, attendance will be suspended according to the School Health and Safety Act, and the suspension period will be ~~14~~ 7 days from the day following the date of the last close contact with the infected person.

(III) Poor physical condition other than I and II

- If you have any of the following heavy symptoms such as difficulty breathing (dyspnea), significant weariness (fatigue), or high fever, or prolonged symptoms of a relatively mild cold such as fever or cough, call the nearest Local Government Call Center for instructions or consult a medical institution with fever outpatient services that provides PCR testing. If you choose to visit a medical institution, avoid contact with others, wear a mask, contact the institution in advance, and promptly receive medical attention. And tell the result of the medical examination to the Health Service Center. If you have these symptoms, attendance will be suspended according to the School Health and Safety Act. The suspension period will last up to three days from the day the symptoms disappear.

(IV) Weak physical condition other than I, II, and III

- If you are not in categories I to III and have mild cold symptoms, you should rest at home.

YNU Action Plans to Prevent the Spread of the Novel Coronavirus (ver. 3.1)

- The phases and accompanying action plans are general guidelines for reference only. Actions will be determined based on comprehensive assessment of infection status, and national and local government policies and requests.
- All international travel is prohibited until further notice by relevant ministries and agencies.

March 4, 2021
